Bonanza Want Ads Bring Results The Bonanza—"First in Everything"

Physique of Country and City Boys.
Under the selective draft law, registrants were given two physical examinations, one by the local draft boards and another by the army surgeons after the men who passed the local board examination reached camp. Analysis of these records of physical examinations shows that the country boys made better records than those from the cities; the white registrants better than the colored, and the native born better records than those of alien birth. These differences are so considerable that 100,000 country boys would furnish for the military service 4,700 more soldiers than would an equal number of city boys. Similarly, 100,000 whites would furnish 1,200 more soldiers than would an equal number of colored. Finally, 100,000 native born would yield 3,500 more soldiers than would a like number of foreign. The importance of these figures may be appreciated by noting that 3,500 men is equivalent to an infantry regiment at full war strength.

Endurance Test.
The setting for the tale is La Jolla, a small town near San Diego. It is a place that boasts of great swimming and many other attractions, besides a museum. A little maiden, whom we will call Nellie, was passing the museum with her mother. Both were newcomers in the town and were taking their first sightseeing tour. Nellie glanced up at the sign in front of the museum—"Man-eating shark. Fifteen cents admission." So the two passed on. Two or three hours later, mother and daughter came back by the same route, and again passed the museum. The sign, of course, was still there. Nellie could not be silenced. "Is that man still eating the shark?" she asked. "I should think he would get tired," Pittsburgh Chronicle-Telegraph.

Diplomats at Washington.
There are 42 accredited representatives of foreign governments in Washington. Besides these there are many unofficial representatives of nations seeking recognition from the American government. Chief among the latter are representatives of the Irish, Ukrainians, Armenians, Lithuanians and Albanians. Only the states of Monaco and San Marino, two of the smallest republics in the world, are without representatives.

Polar Caps on Venus.
According to Edward M. Nelson, writing in the English Mechanic, polar caps were plainly visible on Venus last June in his three-inch refractor, power 160. They are described as of intense whiteness, resembling that of the crater Aristarchus on the moon. A similar observation is reported from M. Flammarion's observatory at Javal, France.

Visit Butler's soft Drink Parlor. We serve soft drinks, candies, cigars, tobacco, fruit and tamales. Located at intersection of Main and Florence avenue, next door to Chistovich & Beko's old stand. Adv.

LONG IDOL OF SMALL BOY

Famous "Deadwood Dick" Lived and Died in Full Appreciation of His Great Popularity.

Deadwood Dick is dead. His real name was Richard Bullock, and he died most conventionally at an age of seventy-five years in a hospital at Glendale, Cal.

Deadwood Dick should have been the happiest of men. Few men can pass twilight years illumined by the glow of their past. Few men are privileged to read heroic lies about themselves which are founded on a modicum of truth. Achilles never read the "Aeneid." Satan never read "Paradise Lost," unless he had perused it since Milton's day by the flutist flames of his phantoms' abode. Siegfried never scanned the "Nibelung Lied." The greatest heroes of the greatest lies by the greatest liars have met their end believing they would be honored and assured by posterity.

Not so with Deadwood Dick. His saga was at his elbow these several decades. All he had to do was to take down one of the volumes over which the boys of a generation or two ago pored to realize what a great man he had not been. And all the time he had the consciousness that he really had passed wonderful days on mountain and plain, hauling gold by stage through perils created by nature and by man—that there was enough of the hero to justify the modern minstrel.—Cincinnati Times-Star.

PEAT ESTABLISHED AS FUEL

In Denmark It Is Employed to Furnish Power for Many Lines of Big Industries.

In 1919 peat established itself as a fuel more firmly than ever in Denmark. It is used now by nearly all the industries, by the private railroads and in the country districts, where it is practically the only fuel. Twelve million peat bricks were taken from the marshes in the Odense district in 1918, and while figures are not available for 1919, it is estimated that the number was considerably larger. The electrical works of the town of Svendborg have successfully used peat as instead of petroleum. As a locomotive fuel it proved to have some disadvantages, requiring a larger boiler and giving off many sparks.

Peat producers have complained that the government's maximum price on this article has made its manufacture difficult. There have been a number of failures. However, the quality of peat has been greatly improved during the last five years, and more has been learned of its possibilities. It will therefore undoubtedly figure much more than previously as an economic factor in Denmark.—New York Sun.
